

Ahmad Azhar
Web Developer

ABOUT ME:

Hi, I'm Ahmad, a website developer located in Ampang Selangor, Malaysia. I am a full time freelance web developer. I have been freelancing since 2007. At the beginning of my web programming career, I spent 8 years as a web programmer for a national online classified website company. I enjoy working directly with my clients, rather than having project managers involved. Most of my clients do not live near me in Selangor. Regardless, I am able to effectively communicate through email and on the phone to build their website and meet their needs.

If you view my web development portfolio examples you can see the PHP and HTML websites I have built. I build websites from scratch, designing and developing MySQL databases and writing all website code. I also build new features into existing websites.
